

ENERGY AUDITING

Detailed site audits and practical recommendations to reduce your energy use and energy spend

Gaining a clear picture of energy usage on your site reveals areas for improvement and potential savings. Maybe your energy use creeps up over time or you plan to upgrade lighting or improve HVAC on your premises.

At Smart Power, we specialise in energy audits. We tailor our professional audits specifically to your needs while complying with industry standards. Our accredited auditors boast extensive experience in commercial, industrial, dairy farming and statutory authority sectors.

Our audit reports document onsite energy and can typically save you between 10-20 percent in variable energy costs. Our recommendations include an extensive cost-benefit analysis that calculates implementation cost and projected annual savings. We can also implement our audit recommendations on your behalf.

You may be eligible for funding through the Energy Efficiency and Conservation Authority (EECA). We can offer our expertise in applying for relevant funding.

BENEFITS

- Tailored audits to reduce costs & carbon footprint
- Potential 10-20% kwh savings
- Reduce costs
- Project management of audit recommendations
- Identify eligibility for government funding EECA
- Independent advice
- Improved NABERSNZ rating
- Extensive experience

NABERSNZ AUDIT

NABERSNZ™ is a scheme designed to measure, rate and improve the energy performance of commercial office buildings in New Zealand. An independent NABERSNZ Certified Rating compares a building's energy usage to other commercial properties.

Certified Ratings range from 0 to 6 stars with buildings scoring a higher rating demonstrating greater energy efficiency.

Online self-assessments are available through: www.nabersnz.govt.nz

Only a NABERSNZ™ Accredited Assessor can provide a formal rating.

At Smart Power, our audit team can offer one of the following NABERSNZ™ ratings audits:

- Base building - rating the energy use of central building services like air conditioning, and common areas like foyers
- Tenancy - rating the energy used in a tenanted area
- Whole building - rating the combined energy use of base building and tenancies.

WHAT OUR CLIENTS SAY

"We've used Smart Power for several years now and found them to be proactive in communicating savings opportunities" Westpac

"We've successfully reduced our on-going energy cost by 30% utilising Smart Power"

ANZ

"Personalised, focused attention to detail, great analytical skills, trusted outcome, reassurance"

"They understand our business and can tailor their support, advice to our needs"

"Good technical expertise"
